

Android Email Configuration

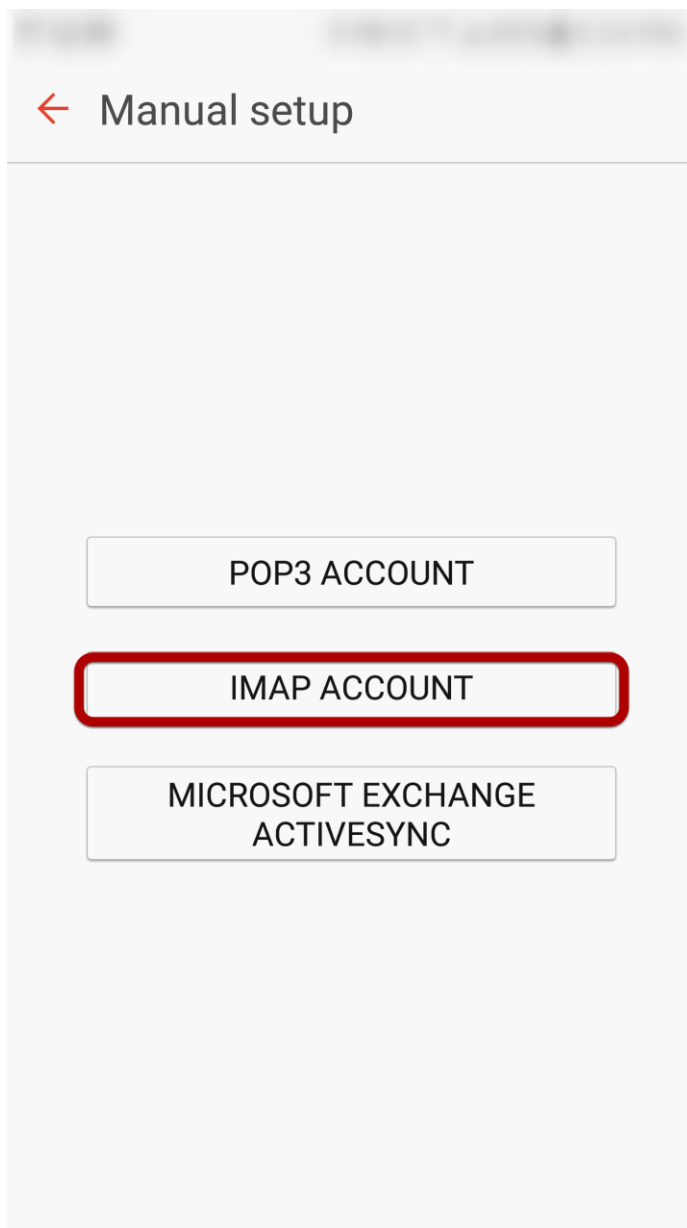

This guide explains how to configure your Android device to access your email account. This tutorial was created running the Android 6 OS. If you are using different hardware or a different OS version, these instructions may differ.

Step 1: Open the Email application

Enter your email address and select **Manual Setup**

Step 2: Select account type

Select **IMAP Account**

Step 3: Enter Incoming Account Settings

Enter the following information:

Username Enter your full email address.

Password

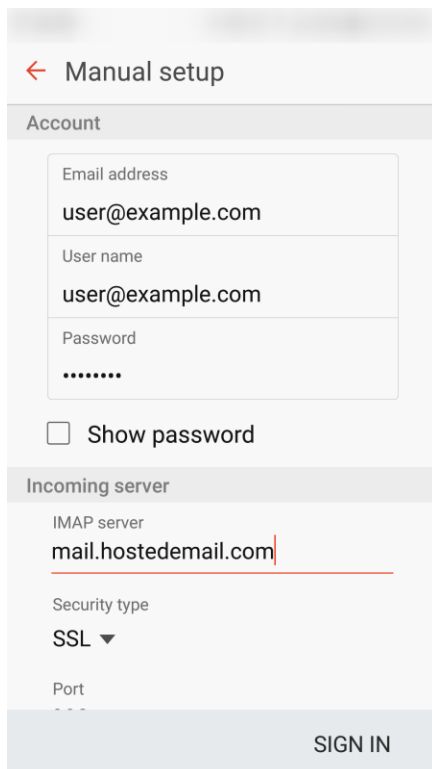

The **Password** field is automatically filled in with the password that you created when you set up your email account.

IMAP server

Enter **mail.iccable.com** (**@iccable.com** addresses) or **mail.mykrcc.com** (**@mykrcc.com** addresses)

Port:

993
